

Governance module — how it works now

Architectural overview after the intensive audit + refactor

The Governance module is the **oversight and accountability layer** across Oblivion Findings. It does not own operational data — it consumes signals from Finance, HR, Sites, Incidents, Health & Safety, Clinical, Safeguarding, Assets, and Fleet, and surfaces what executives and board members need to **decide, approve, escalate, or attest to**.

Verdict delivered: Option B — heavy refactor (not rebuild)

Preserved: 19 controllers, ~50 models, 13 services, 60 Inertia pages, 31 permissions, 8 jobs

Added: 3 controllers, 3 models, 3 commands, 8 policies, 7 Inertia pages, 24 audit-tracked models

Removed: 0 user-facing features

Frontend surface

6-group collapsible sidebar (was 18 flat items)

5-band Overview dashboard with finance widgets

Shared lib/governance-status.ts across 23 pages

Typed permission tree — no (auth.can as any) casts

EmptyList on index pages

New pages: AuditLog, Settings, SpendApprovals, Packs Index, Attestation

Domain layer

Policies registered for 8 new entities

AuditableChanges on 24 governance models

GovernanceAuditService::log() at action paths

Multi-step workflows wrapped in transactions

GovernanceSetting drives escalation + thresholds

ComplianceEngineService escalation now configurable

Cross-module wiring

ClientIncidentObserver -> IncidentGovernanceEscalation

SafeguardingConcernObserver -> NotifiableIncident

governance:sync-donor-fund-compliance (daily)

governance:sync-site-risk-reviews (daily)

governance:spawn-recurring-meetings (weekly)

BudgetAllocation links annual -> monthly site budget

Verification: 106 governance tests / 615 assertions / Vite build green / 107 files changed in branch

Information architecture — 6 collapsible groups

GovernanceNav.tsx — was 18 flat items, now grouped by user task

BEFORE — 18 flat items (overwhelming)

Dashboard
Meetings
Meeting Calendar

AFTER — 6 groups + Settings (collapsible; remembers open state)

[+] Overview

- Dashboard (5-band Executive Cockpit)

[+] Board & Meetings

- Meetings (+ Calendar)
- Resolutions & Voting
- Action Items
- Board Admin (members, committees, interests, evaluations)

[+] Risk & Compliance

- Risk Register (+ Heatmap, Trends)
- Compliance Register (+ Calendar)
- Te Tiriti Obligations

[+] Policies & Evidence

- Policies (+ Attestations)
- Governance Documents
- Audit Log

[+] Strategy & Performance

- Strategic Plan (linked to Roadmap)
- CEO Reports
- Performance Reviews
- Clinical Governance

[+] Financial Governance

- Budgets (+ Allocations + Variance)
- Spend Approvals (above configurable threshold)

[+] Settings

- Governance Settings (escalation paths, thresholds)

Overview dashboard — 5 horizontal bands

GovernancePresenter::dashboard() — each band scannable in <5 seconds

Band 1 — Workflow Center

What needs my attention this week

Prioritised actions across meetings, decisions, risk, compliance, budgets, follow-through. Critical / overdue / pending priority badges. Role-filtered: only your work.

Band 2 — Financial Governance

How are we tracking financially

Budget vs actual · Sites over budget · Pending spend approvals · Funding gaps · Capex queue · Financial-risk count. Sourced from BudgetVarianceService + SpendApproval — no duplicated finance data.

Band 3 — Operations & People

How is the organisation performing

Open critical risks · Overdue compliance · Notifiable incidents pending external report · Safeguarding escalations · Workforce certification % · Client safety score.

Band 4 — Upcoming Governance

What's on next

Next 3 meetings (RSVP + pre-read status) · Pending resolutions + deadlines · CEO report status for next meeting · Board pack readiness · Policy attestations outstanding.

Band 5 — Recent Decisions & Changes

What was decided

Last 5 resolutions carried (with amounts) · Last 5 audit-log events with diffs · Last 3 policies approved. Click through to the source action.

Cross-module data flow

Governance consumes signals from operational modules; never duplicates their source data

Each module remains the source of truth for its own data. Governance subscribes, summarises, and surfaces — it does not duplicate.

Spend approval lifecycle

SpendApproval model + controller + policy. Above-threshold spend requires a Resolution sign-off.

Configurable thresholds — /governance/settings (governance_settings table)

spend_approval.threshold.capex	NZ\$5,000	(default)
spend_approval.threshold.opex	NZ\$10,000	(default)
spend_approval.threshold.supplier_contract	NZ\$10,000	(default)
spend_approval.threshold.donor_restricted	NZ\$25,000	(default)

Polymorphic source — any SpendApproval can attach to:

FinBill	(above-threshold bills require sign-off before posting)
FinPurchaseOrder	(new POs above threshold queue here)
FinPaymentRun	(batched payments above threshold)
(none)	-- stand-alone future commitment / forward approval

Audit trail + scheduled jobs

Every governance write is auditable; cross-module reconciliation runs on schedule

AUDIT TRAIL - unified read at /governance/audit-log

SCHEDULED JOBS - Pacific/Auckland timezone

06:00 Mon	governance:spawn-recurring-meetings	Spawn meetings from active templates
06:15 daily	governance:sync-donor-fund-compliance	30 days before FinDonorFund.next_report_due
06:30 daily	governance:sync-site-risk-reviews	14 days before Site.risk_review_date
07:45 daily	governance:check-risk-reviews	Notify owners of risks due for review
/15 min	governance:compliance-reminders	Process due compliance reminders (escalation level configurable)
/15 min	SendBoardDigest job	Weekly board digest emails
hourly	SyncBudgetActualsJob	Pull Finance actuals into BudgetLineItem
00:20 daily	governance:sync-clinical-data	Refresh ClinicalGovernanceSnapshot
